ABSTRACT

This Kids Count data book examines statewide trends in the well-being of Arkansas' children. The statistical portrait is based on the following areas of children's well-being: demographics; children's living situations; family support; risks to children; resources for children; and public school environment. The specific indicators include: (1) child population; (2) children living with parents; (3) out-of-home placements; (4) family income; (5) children in families receiving TEA; (6) children in poverty; (7) low birth weights; (8) births to adolescents; (9) teen fertility rates; (10) child abuse cases; (11) youth held in state custody; (12) uninsured children; (13) food stamp cases; (14) student assaults; (15) child care capacity; (16) after-school and summer programs; (17) child abuse prevention programs; (18) pregnancy prevention programs; (19) abstinence programs; (20) 4-H clubs; (21) hospital beds; (22) physician availability; (23) children receiving mental health care; (24) Medicaid recipients; (25) children receiving food provision assistance; (26) academic achievement in reading and math; (27) dropout rate; (28) graduation rate; and (29) student teacher ratio. The first section of the data book presents introductory and methodological information, resources versus risk assessment of Arkansas' counties, and an explanation of resources at risk. The major portion of the data book presents state and county data tables for each indicator. The data book concludes with three appendices including data notes and sources, resource and risk index, and raw data by county. (SD)

Introduction

The Decisions Arkansas Makes Today Will Have Significant Consequences for Its Children

Beneath the headlines about terrorists attacks, kidnappings, a state education system in turmoil, a sagging economy and state budget cuts is an even more urgent story: The effects on our children of the uncertain times in which we live.

It is a pivotal time in Arkansas' history. Immediate choices must be made about state spending and education. With these decisions, we determine if our children will fare well or if they will not. We should not lose perspective about what's going on in the world around us, but we must also understand the importance and the consequences of the steps we are about to take together.

Society's future is in the hands of its youngest citizens. We must provide our young people with the resources and opportunities to enhance their development, keep them safe from harm and provide the comfort they need from the people around them. It is from this strong foundation that children will thrive and become caring, competent and responsible adults.

Too few young people grow up experiencing key ingredients for healthy development. They do not experience encouragement from adults or building sustainable relationships with their peers. Many have too little to do that is positive or constructive. Though parents, professionals and government have roles to play, much of the responsibility for the healthy development of children is in the hands of the people.

Families need support from their communities to provide the groundwork from which their children will grow into productive adults. Every community offers certain resources – from quality child care to affordable home ownership to school nurses – to its families to guide

children into adulthood, to keep them:safe from harm. But much more is needed.

In recent years, state and local governments have invested more in communities to create programs and design public policies to meet the needs of families. And, these investments are yielding better measures of child well-being. But this devolution of service delivery assumes government is better at assessing what young people need and creating the programs to meet those needs. If this is true, then governments have the power to improve the opportunities available to children by designing policies and programs to strengthen families.

In these uncertain times, community leaders need to be more informed than ever so they can make the best possible decisions for children. With state and local data, this report intends to assist communities identify the resources available to combat the uncertainties faced by young people. Decision-makers should use this information to determine how best to improve their communities for children, and parents might use this information to learn what resources exist for their children.

Charles Dickens' famous paragraph begins, "It was the worst of times, it was the best of times. ..." He could have been writing about today's Arkansas. We face phenomenal decisions affecting our children as we try to overcome the toughest barriers to our children's future prosperity. Our children will have opportunities to succeed and will have the resources they need to bolster their development, if we provide it to them. And that's the least we can do.

Yetunde Shobo and Julie C. Robbins

Methodology

Data presented in this publication was collected based on the premise that multiple risks and resources affect outcomes for children. This is not a new assumption. However, we patterned our data collection on two research models – one from the Annie E. Casey Foundation and another from the Search Institute. The Casey model uses very specific indicators, some of which we were able to emulate exactly because the data are available from state and county data collection systems. The Search Institute model, however, does not rely on specific data linked to specific indicators, but instead on a conceptual model of essential socialization experiences. It is important the reader know we are not presuming to follow either of these models exactly.

Each model identifies critical factors affecting the growth and development of children. When put together, the individual factors give a comprehensive view of what hinders and encourages the positive development of children into productive adults. The Casey model focuses its attention on a family's basic economic and social conditions and how the family's money, work and time affect its children. The Search Institute model uses attributes describing the quality of life, aesthetics and values of the world around children and thus, how children are affected.

The primary reason we are unable to present data in the exact method of the Casey and Search Institute models is because data just is not collected in Arkansas using those frameworks. While the Arkansas Youth Risk Behavior Survey, conducted by the Department of Education, does identify risks and resources for children in health and safety, it is not conducted in every county, nor does it gather data based exactly on the Casey or Search Institute models. However, we did find state and local data related to the indicators used in the Casey model or fitting within the context of the Search Institute model, giving us some evidence of the risks to children and the opportunities available to children in each county.

Lastly, the data present here is collected from diverse sources, each with different reporting formats. The differences in reporting are inconsequential, since each data source has uniform collection and reporting procedures.

The Annie E. Casey Foundation's 1999 National Kids Count Data Book focused on six measures of child well-being, collectively known as the "Family Risk Index." The Family Risk Index measures how many risks a child is experiencing at the same time, thus putting her at an elevated risk for negative outcomes. The measures are:

- Absence of a parent When children grow up with only one parent or no parents, one of the attributes of strong families—time together—is diminished. This is because single——parents must take on all the roles often shared in two-parent homes: nurturer, monitor, guide, disciplinarian and breadwinner. In addition, there is no adult back-up to reinforce disciplinary lessons or family teachings, to provide role models or share the load of care.
- Parent education level Research has shown the parallel between a mother's education level and her child's learning pace, especially in the early years. Studies indicate that the less education a mother has, the less likely her child will be read to at home or ready for school. Children born to a high-school drop-out are twice as likely to be drop-outs themselves.
- Family poverty status The income available to a family determines its ability to meet the needs of the children. Poverty hinders families from providing their children with the broad array of resources and experiences to facilitate their transition into productive adulthood. Research shows children growing up poor are also more likely to become teenage parents, drop out of school and be unemployed young adults.

- Parent employment status We know the importance of parental employment on the outcomes of children. Working parents are extremely influential role models for their children because they impart the value of work and earning. When a parent is securely employed, children learn earlier and more about the world of work and career, thus fostering their own sense of adult responsibility. Also, secure and long-term employment makes household income more predictable, reducing the parent's stress and allowing her to exhibit confidence and authority to her children.
- Welfare assistance Welfare benefits are intended to provide support for families transiting to self-sufficiency. However, chronic dependence on public assistance may have the opposite effect. Research shows that parents who rely on welfare over time reveal a diminished sense of control over their own lives and the lives of their children. So, even though welfare benefits are resources for families, they should be designed to support families and facilitate self-sufficiency.
- Health insurance coverage An uninsured child will most likely suffer from exacerbated conditions that could have been averted by the availability and usage of preventive services. Research shows that uninsured children are less likely to use preventive health services. These conditions may impede a child's ability to participate fully in social and academic activities.

According to the Kids Count report, "When risk factors are combined, they tend to be mutually reinforcing, creating an environment of risk that reduces the chances for the long-term healthy development of children." The report suggested that the higher the number of risk factors a child faces, the higher the risk of the child having outcomes to

further limit their ability to develop into productive and successful adults.

The report categorized children facing four or more of these risk factors as "high-risk" because they would face greater obstacles to success and have higher odds of failing in life. Very few of these "high-risk" children grow up to be healthy and productive adults. The 2001 Casey Foundation Kids Count report estimated that 15 percent of Arkansas children were in the high-risk category.

At the local level, community leaders can use this Family Risk Index to identify those families and children in greatest need, and create policies and programs specifically designed to reduce the risks experienced by these families. Both indirect support to children through their families (such as food stamps) or direct support to the children (such as access to a community Boys and Girls Club) can respond to the needs of children, reducing their risks and improving their outcomes for adulthood.

This report includes data for only four of the six indicators, because these are the indicators for which data are available at the county level. The four are:

- Absence of a parent
- Family poverty status
- Welfare assistance
- Health insurance coverage.

Search Institute in Wisconsin has created a model for understanding the developmental needs of children and adolescents. Rooted in research on 100,000 American children, the Institute has identified 40 building blocks, or developmental assets, all children need to grow into healthy, responsible and caring adults.

Created in 1990, the assets framework is grounded in research on child and adolescent development, risk prevention and resiliency. Such research asserts that the more resources young people have available to them, the less likely they are to engage in risky behavior. Search Institute concludes that the more development assets available to children, the more likely it is

Search Institute's list of building blocks is spread across eight broad areas of human development, four "external" and four "internal" assets. These categories paint a picture of the positive things all young people need to grow up healthy and competent. Together, the assets offer a set of benchmarks for positive child and adolescent development. These assets clearly show the important roles families, schools, congregations, neighborhoods, youth organizations and others in the community play in shaping young people's lives.

"External" assets refer to the positive experiences young people receive from people and institutions in their lives. The four categories of external assets are

- Support. Young people need to experience support, care and love from their families and many others. They need organizations and institutions providing positive, supportive environments.
- **Empowerment.** Young people need to be valued by their community and have opportunities to contribute to others. They must be safe and feel secure to do so.
- Boundaries and expectations. Young people need to know what is expected of them and whether activities and behaviors are "in bounds" or "out of bounds."
- Constructive use of time. Young people need constructive, enriching opportunities for growth through creative activities, youth programs, congregational involvement and quality time at home.

"Internal" assets refer to those qualities guiding choices and creating a sense of centeredness, purpose and focus. Shaping internal dispositions encouraging wise, responsible and compassionate judgments is particularly important. The four categories of internal assets are

- Commitment to learning. Young people need to develop a lifelong commitment to education and learning.
- Positive values. Youth need to develop strong values to guide their choices.

- Social competencies. Young people need skills and competencies equipping them to make positive choices, build relationships and succeed in life.
- Positive identity.. Young people need a strong sense of their own power, purpose, worth and promise.

The theory behind Search Institute's model is the "big picture." The framework steps back and looks at the whole - pulling many pieces together into a comprehensive vision of what young people need to thrive. Therefore, it is impossible to assign specific data to each of Search Institute's developmental assets because the model asserts that the human experience - a philosophical idea about which no data can be collected - has long-term, positive consequences for young people. The information presented in this data book shows various internal and external assets available (and not available) to children in Arkansas. Such a variety of data begins to build the "big picture" of ways in which Arkansas communities can contribute to the development of its youngest citizens.

40 Developmental Assets

Search Institute has identified the following building blocks of healthy development to help young people grow up healthy, caring and responsible.

	asset type	asset name and definition
	SUPPORT	 Family support - Family life provides high levels of love and support. Positive family communication - Young person and her parent(s) communicate positively, and young person is willing to seek advice and counsel from parent(s). Other adult relationships - Young person receives support from 3 or more nonparent adults. Caring neighborhood - Young person experiences caring neighbors. Caring school climate - School provides a caring, encouraging environment. Parent involvement in schooling - Parent(s) are actively involved in helping young person succeed in school.
SSETS	EMPOWERMENT	 7. Community values youth - Young person perceives adults in the community value youth. 8. Youth as resources - Young people are given useful roles in the community. 9. Service to others - Young person serves in the community 1 hour or more per week. 10. Safety - Young person feels safe at home, at school, and in the neighborhood.
INTERNAL ASSETS	BOUNDARIES & EXPECTATIONS	 Family boundaries - Family has clear rules and consequences and monitors the young person's whereabouts. School boundaries - School provides clear rules and consequences. Neighborhood boundaries - Neighbors take responsibility for monitoring young people's behavior. Adult role models - Parent(s) and other adults model positive, responsible behavior. Positive peer influence - Young person's best friends model responsible behavior. High expectations - Both parent(s) and teachers encourage the young person to do well.
	CONSTRUCTIVE USE OF TIME	 Creative activities - Young person spends 3 or more hours per week in lessons or practice in music, theater or other arts. Youth programs - Young person spends 3 or more hours per week in sports, clubs, or organizations at school and/or in the community. Religious community - Young person spends 1 or more hours per week in activities in a religious institution. Time at home - Young person is out with friends "with nothing special to do" 2 or fewer nights per week.
• · · · · · · · · · · · · · · · · · · ·	COMMITMENT TO LEARNING	 Achievement motivation - Young person is motivated to do well in school. School engagement - Young person is actively engaged in learning. Homework - Young person reports doing at least 1 hour of homework every school day. Bonding to school - Young person cares about his school. Reading for pleasure - Young person reads for pleasure 3 or more hours a week.
AL ASSETS	POSITIVE VALUES	 26. Caring - Young person places high value on helping other people. 27. Equality and social justice - Young person places high value on promoting equality and reducing hunger and poverty. 28. Integrity - Young person acts on convictions and stands up for her beliefs. 29. Honesty - Young person "tells the truth, even when it is not easy." 30. Responsibility - Young person acceps and taxes personal responsibility. 31. Restraint - Young person believes it is important not to be sexually active or to use alcohol or other drugs.
EXTERNAL	SOCIAL COMPETENCIES	 Planning and decision-making - Young person knows how to plan ahead and make choices. Interpersonal competence - Young person has empathy, sensitivity and friendship skills. Cultural competence - Young person has knowledge of and comfort with people of different cultural/racial/ethnic backgrounds. Resistance skills - Young person can resist negative peer pressure and dangerous situations. Peaceful conflict resolution - Young person seeks to resolve conflict nonviolently.
	POSITIVE IDENTITY	 37. Personal power - Young person feels she has control over "things happening to me." 38. Self-esteem - Young person reports having high self-esteem. 39. Sense of purpose - Young person reports "my life has a purpose." 40. Positive view of personal future - Young person is optimistic about his personal

Resources vs. Risks

The availability of developmental assets in each Arkansas county differs, as does the level of risk for children living there. In some Arkansas counties, children live with few risks and a lot of assets available to them. In other counties, the exact opposite is true: Children are at

higher risk and have almost no resources available to them. The differences and similarities among counties is worth examination, so Arkansas Advocates developed the "resource and risk index" based on the indicators examined for each county.

Method

The state average for each indicator is used as the baseline. For each risk indicator over the state average, a value of "1" is assigned to the county's risk index. Similarly, a value of "1" is assigned to the county's resource index for each resource indicator above the state's average. If the county's risk or resource indicator is the same as or lower than the state

average, a value of "0" is assigned. (The state average is used as the baseline for comparison-purposes only. The

average level of resources available in Arkansas falls significantly below the national average. This analysis is not intended to show that the average level of resources available is ideal.)

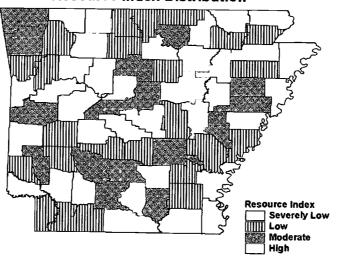

Twelve risk indicators and 11 resource indicators of

the indicators available on the county pages were used for this comparison; therefore, the highest possible value a county could have is 12 (risks) and 11 (resources). Some indicators were modified to estimate prevalence rates and average resources available per person to allow for a better comparison.

The resource index is catergorized in the following manner: High Resources (6-8); Moderate Resources (5); Low to Moderate Resources (4); and Low Resources (2-3). The risk index is catergorized similarly: Severe Risks (8-11); High Risks (6-7); Moderate Risks (4-5); and Low Risks (1-3).

Risk Index Distribution Risk Index Low Moderate High

Resource Index Distribution

Analysis

Unfortunately, most of Arkansas counties have low resources, and therefore, high risks; very few counties

have numerous resources available to its children. However, no county has a resource index less than 2.

The distribution of the risk index seems to follow a clearly defined geographical pattern, with counties in Southeast Arkansas falling into the High Risk category. The distribution of resources is less clearly defined; counties in the

Low and High resources categories are more evenly dispersed around the state.

Again, the average level of resources in Arkansas in not ideal, and this index is only for comparisons among the counties. However, this analysis offers further evidence supporting the strong correlation between the resources available to a child and the child's ability to grow into a healthy and productive adult.

RESOURCE AND RISK INDEX							
	HIGH RESOURCES (6-8)						
SEVERE RISKS (8-11)	Woodruff, Lafayette, Drew. Crittenden, Mississippi, St. Francis, Clay, Desha, Hempstead, Lee, Ashley	Poinsett, Phillips, Arkansas	Van Buren, Monroe, Bradley, Cross, Dallas, Jefferson, Ouachita	Garland, Chicot, Union			
HIGH RISKS (6-7)	Sevier, Yell, Little Rock, Scott	Sebastian, Columbia. Crawford, Lawrence, Lincoln, Marion, Miller	Howard	Jackson, Pulaski, Conway, Nevada, Newton			
MODERATE RISKS (4-5)	Johnson, Stone, Carroll, Polk, Pope	Montgomery, Sharp, Cleburne, Fulton, Lonoke, Baxter, Hot Springs	Searcy, Clark, Perry	Craighead, Prairie, Independence			
LOW RISKS (1-3)	Logan, Randolph	Plke, Greene, Madison, Franklin, Grant	Benton, Izard, Washington, Saline	Faulkner, Calhoun, Cleveland, White, Boone			

Resources at Risk

It Cut Crime and Raised Grades in Arkansas, but Washington Wanted Harder Evidence

Federal dollars for a limousine ride and a manicure? Toyce Newton knows that what she did here on Valentine's Day would delight critics who aim to slash funds for youth job training programs such as hers. But the fact is, by the time the Arkansas Youth Opportunity Movement treated 95 youth to a Valentine's gala – complete with beauty makeovers and shoe shines – the ax had already been raised.

Ten days earlier, President George Bush unveiled a budget proposal that cuts Youth Opportunity Grants (YOGs), which fund Newton's program and 35 others around the country, from \$225 million this year to \$44.5 million in 2003. The White House says the YOG functions can be handled by other programs, such as Jobs Corps.

Those who run YOG-funded programs disagree. For anyone looking for impact from a program that is being phased out, there's this from rural Arkansas:

- A deputy prosecutor for Desha County says the Youth Opportunity Movement (known here as YO) has reduced juvenile crime so much that she credits it for closing the county's 18-bed juvenile detention facility.
- One of Desha County's largest employers says it located here specifically because of the skilled and federally subsidized labor provided by youths.
- Lake Village Schools Superintendent Joyce Vaught says YO has visibly helped youths who were "falling through the cracks. Now, with YO, they have one-on-one tutoring. It's made a huge difference in their grades."

But the program appears to have been a victim of the change in presidential administrations. The U.S. Department of Labor (DOL) pledged in February 2000 to spend \$1.38 billion on the YOGs, but a senior Labor official says it will not meet that target because the agency never awarded a second round of grants, which would have come under Bush. The official says the president did not want to commit to more grants without evidence of success from the first grantees.

The YOG programs are so new that there are no evaluations of their effectiveness; that won't come until at least next year, the DOL says.

"There is a lot of evidence this strategy works. In fact, it was built on a body of evidence that it works," says Donna Walker James, senior program associate for the American Youth Policy Forum in Washington, D.C. "To say it's not proven is just ridiculous."

David Brown, executive director of the National Youth Employment Coalition (of which many of the YOG sites are members), called the proposed cuts "the most troubling" aspect of the budget proposal.

That proposal does not criticize YOGs, but notes that states can get other youth job-training money through the Workforce Investment Act. Bush's budget would complete the five-year grants to existing YOG sites.

Most of the programs serve poor inner-city communities, including those in Detroit, Houston and Los Angeles. There are seven rural programs. The Youth Policy Forum recently highlighted the Arkansas program, where 55 staff serve 1,400 youths, as a model.

That model exists only because one person was willing to sit outside a governor's office for three days.

A Rare Pot of Money

When Newton heard about the new YOG grants in 1999 and their mission to place at-risk young people (ages 14-21) in long-term jobs, the idea seemed tailor-made for Desha and Chicot counties (total pop.: 29,458).

Many youths here have little opportunity to further their education or build careers: 35 percent to 40 percent of the counties' children live in poverty. Annual drop-out rates in middle and high schools hover around 3.6 to 4 percent. (The state average is 3 percent.) Both counties have high teen birth rates, with Desha's among the highest in the state – 109.6 births per 1,000 women ages 15-19 in 1999, according to the Arkansas Department of Health's latest figures. (The national teen birth rate is 49.6.)

The nonprofit Phoenix Youth & Family Services, where Newton is executive director, was already serving many of those kids through a contract with the state – offering follow-up counseling and after-care for juvenile delinquents coming out of Arkansas' Division of Youth Services. But because the two counties were not considered federal empowerment zones, Newton's YOG application had to be signed by Gov. Mike Huckabee (R).

With the deadline approaching and no signed application in hand, Newton went to Little Rock and camped out in front of the governor's office for three days. Using every connection she had, she finally persuaded a staff member to include her proposal as one of the day's priorities for the governor. He signed it on the day the application was due.

The grant gives YO \$5 million for each of the first two years, \$3.75 million for the third year and \$5 million to cover the fourth and fifth years.

That kind of money makes a big splash here,

where there are few big companies youth programs can tap for support. "This is the first time in this area that we've had a pot of money that is sufficient to really do what we need and address the problems," Newton says.

Elsewhere in the country, more than 30 businesses and 12 foundations have supplemented the YOG grants: In Newark, N.J., and Philadelphia, the Prudential Insurance Co. of America provided a \$2.5 million four-year grant to launch a Young Entrepreneur Program, while AT&T kicked in another \$100,000 for Newark to create an Academy of Information Technology for high school students. In San Diego, the Jacobs Family Foundation donated \$5 million to build the San Diego Youth Opportunity Center, which houses a youth mall, Homey Youth Foundation and the Institute for Responsible Fatherhood.

Businesses have also teamed with YOG programs to hire youth as auto technicians, pharmacy technicians, United Parcel Service line workers and more. That's true in Arkansas, where school districts have also helped by donating old buildings. Two of YO's five sites (Lake Village and Eudora) are in renovated school buildings.

Tutoring and Tae Kwon Do

"They don't come to play. They come to work." That's Andrew Temple, operations manager for Temple Products, talking about the YO participants who've come to work for him. At one point, Temple says, about 80 percent of the greenhouse manufacturing company's 56 employees came from YO. And because of YO, Temple expects to grow to 200 workers next spring.

The program has built a strong reputation among local employers with a "holistic" approach that might seem either all-inclusive or straying from its mission. Aside from such basic assistance as one-on-one tutoring, mentoring and ACT preparation, youths get substance abuse counseling and even etiquette lessons.

Evelyn Givens, director of the Chicot County youth opportunity program, says "soft" skills are just as important as reading, writing and math. YO youths attend classes in communication, money management, anger or

management, leadership, parenting, diversity, tae kwon do and art.

How does that meet the YOG program goals to decrease high school drop-out rates, increase post-secondary school rates and increase employment?

"We've got to develop the young person from a socialization standpoint so they can be sufficient in the workplace," Newton says. "We live in a very depressed area, economically. We try to expose them to as much as we can. Why would you get out of bed if this was your life?"

Especially challenging is that half of the youths are not in school; they frequently have extra barriers to career success, such as mental illness and child care needs. (The DOL requires each program to target both in-school and out-of-school youth, with most of the funds spent on the latter).

"We take them to dinner and the theater," Newton says of all the youths who complete certain activities outlined in their individual service plans. "But all of these activities are tied to a program goal, and they can't go on trips until they've met certain goals."

And meeting those goals should lead to long-term employment. That's where YO job developer Lee Simpson comes in. Jobs are already limited in this rural area, and most of the youth have never held a job. Simpson has made connections with everything from local nursing homes to catfish farms to welding shops.

One draw for the employer is that the DOL covers half the employee's salary for up to 90 days, Simpson says. In fact, Temple says YO is "the main reason we located in McGehee," a town of 4,570 in Desha County. "The payroll subsidies are great, and the job developers' follow-up with the workers is incredible."

Temple has 36 YO participants working at its factory. Five were hired full time after their 90-day subsidies ended. "We've had low turnover because these employees know how to hit the ground running when they get here," Temple says.

For those headed to post-secondary school, the YOG

grant provides tuition assistance to attend colleges and technical institutes. Those who receive such help must volunteer at YO to help other participants, and meet with someone from the agency once a month at the school, "just to check on things," Givens says.

Not Just Jobs

Community leaders in Desha and Chicot counties say YO's impact goes beyond giving a few employers cheap labor or helping a few young people bring home paychecks for a while.

Teresa French, deputy prosecutor for Desha County, credits YO with the closing of the county's juvenile detention facility. "We opened that facility eight years ago, and it was always full," French says. "Within the last year-and-ahalf, we've had a huge decrease in the number of kids we've had to detain. We had to close the facility because it got to be where there were no youth there."

"Before this program," she says, "there was nothing for the youth to do. Now, they want to be employed and have help to get there."

Dermott Mayor Floyd Gray says the program is the only thing youth have just for them. "We have no youth activities," he says. "There's nothing to motivate our kids. We don't have tennis courts or swimming pools. We've been fighting for these things for a long time, but now at least we have this."

"We've tried similar programs in the area using volunteers as mentors," French says, "but the thing about YO is that they can coordinate it all. And that's because they have the funding."

Those seeking hard numbers, however, will find little. YOG program directors say it's too early to evaluate the impact. They offer shortterm participant numbers and statistics of how many youth are furthering their education

and landing jobs. But there's nothing yet on the programs' effect on local economies, long-term employment, drop-outs rates or teen pregnancy.

Newton and other program directors have individual success stories and anecdotal evidence, like the facts that grades have risen in area schools and juvenile crime has dropped.

But even though DOL plans to fulfill the five-year grant to YO, keeping it afloat after that appears unlikely, especially when one of the largest employers in the two counties is YO itself.

How about Job Corps? As in much of the country, the nearest program is a hike – 150 miles away. And Newton contends that such a residential program "just doesn't fit with these young people. We need a community-based program here. The program we have here is tailored to the specific needs of [our] youth."

"As the grant reduces, the community is expected to pick up the services," she says. "That's going to be extremely difficult, especially for rural areas. Losing this funding would essentially wipe us out."

Reaching Out-of-School Youth

In its second year of operation, the Arkansas YO has 1,400 participants, 700 of whom are out of school. That makes it one of the top YOG programs in terms of finding and recruiting out-of-school youth, which is often one of the biggest challenges for the programs. YO has hit 127 percent of its U.S. Department of Labor goal in this area (along with 106 percent of its goal for total enrollment).

One reason for this success: YO is among only a handful of YOG agencies to create a youth advocate program. The agency hires youth who have demonstrated outstanding leadership skills to work part-time at the YO centers and help recruit out-of-school participants.

"They have my ear and the ear of the management team," says Newton. "It works because they have a full and complete voice in the services of their population."

The program includes the youth leaders in staff training and sends them to the Youth Opportunity Leadership Institute twice a year.

"It's a great addition because these young people give us the insight into what youth want in our programs," Newton says.

By the Numbers

Of the 1,400 participants in YO, the program reports:

- 801 remained in school.
- six received GEDs.
- 11 dropouts returned to high school.
- 111 earned a high school diploma.
- 114 entered college.
- 22 are in vocational training.
- 101 are in unsubsidized job placement (average earnings: \$6.27 per hour).

Exploring Opportunities for Children in Uncertain Times

Appendices

Appendix I: Data Notes & Sources

DEMOGRAPHICS

The **Population** and **Population of Children** are the total population and the population under age 18, respectively, from the 2000 U.S. Census. Source: U.S. Census Web site, www.census.gov

Births is defined as the number of live births to Arkansas residents in 1999. Source: Arkansas Department of Health Web site, www.healthyarkansas.com/stats/trends99/ TRND.HTM

CHILDREN'S LIVING SITUATIONS

Data on **Children's Living Situations** are self-reported living situations from the 2000 Census. Source: 2000 Census Summary File 1, U.S. Census Bureau Web site, www.census.gov

FAMILY SUPPORT

Family Income Standard (FIS) is defined as the amount of money required by a working Arkansas family with children to meet ongoing, basic daily needs without assistance from governmental agencies or private charities. This measure was developed by Arkansas Advocates for Children and Families. Source: www.aradvocates.org/finances/fisexecsumm.pdf

County Median Income is a model-estimate of the middle income of residents in a county, if residents' incomes were arranged in order. This information was obtained from the 1999 current population survey. Source: U.S. Census Bureau Web site, www.census.gov.hhes/www/saipe/stcty/a98-05.htm

Children Receiving TEA is the average number of children who received cash assistance through the Transitional Employment Assistance program (TEA). Source: Arkansas Department of Human Services 2000 Statistical Report

RISKS TO CHILDREN

Children in Poverty, Percent of Children in Poverty, Residents in Poverty, and Percent of all Residents in Poverty are measures of the total population and the population of children in a county that are living below 100% of the federal poverty level in 1998. These are all model-estimates. Source: U.S. Census Bureau Web site, www.census.gov.hhes/www/saipe/stcty/a98 05.htm

Low Birth Weights is the number of resident births weighing less than 2,500 grams during 1999. The percentage is calculated by dividing the number of low birth weights by total live births and multiplying by 100. Source: Arkansas Department of Health Web site, www.healthyarkansas.com/stats/trends99/TRND.HTM

Births to Adolescents is defined as the number of live births to women under the age of 18. Source: Hometown Health Factbook, Arkansas 2000, Arkansas Department of Health Center for Health Statistics Division of Vital Records

Teen Fertility Rate is calculated by dividing the number of births to women age 15-19 in a given year by the population of women age 15-19 and multiplying by 1,000. Source: Hometown Health Factbook, Arkansas 2000, Arkansas Department of Health Center for Health Statistic Division of Vital Records

Child Abuse Cases is substantiated cases of child abuse in a county. This is the number of assessments completed by the Division of Children and Family Services and the Family Protection Unit in FY2000. Source: Department of Human Services 2000 Statistical Report

Youth Held in State Custody is the number of children under 18 court-ordered to the custody of the Division of Youth Services in FY2000. Source: Department of Human Services 2000 Statistical Report

Uninsured is the percent of children living under the 200% poverty level who are uninsured. Source: Arkansas Center for Health Improvement's 2001 Arkansas Household Survey of Health Insurance Coverage

Food Stamp Cases is the average number of families with income below 130% of the federal poverty level and certain resource levels who received food stamps in FY2001. Source: Report RS-0869, Arkansas Department of Human Services 2000 Statistical Report

Student Assaults is the percentage of safety-related students assaulting other students during th 1998-99 school year. Source: Arkansas Department of Education Web site, www.as-is.org

EARLY CHILDHOOD AND ADOLESCENCE

Capacity of Child Care Centers is the maximum number of infant/toddler and school-age children that facilities are licensed to provide services by the Department of Human Services Division of Child Care Services. This figure does not include registered facilities or family homes. Source: Department of Human Services 2000 Statistical Report

Licensed After-school/Summer Programs and **Children Served** are the number of after-school and summer programs and the average number of children served by the facilities in FY2001. Source: Department of Human Services Division of Child Care and Early Childhood Education

Child Abuse Prevention Programs is the number of child abuse prevention programs recorded by the Arkansas Children's Trust Fund for each county. Source: Arkansas Children's Trust Fund Web site, www.arctf.org

Youth Served by Pregnancy Prevention Programs At Least Once and Ongoing represent the number of youth served through the Unwed Birth Prevention Coalition.

These numbers are self-reported by county. Source: The Unwed Birth Prevention Coalition Proposed Vs. Actual Activities 2000-01 Report

Youth Served by an Abstinence Programs At Least Once reflects the number of youth completing a pretest

by an Abstinence Programs Ongoing reflects the number of youth completing posttests associated with abstinence programs in particular counties. These programs are funded through the Title V, Section 510 Arkansas Abstinence Education Program. Source: Phase I Interim Evaluation Report to the Arkansas Department of Health

4-H Clubs, **Members** and **Youth Served** was obtained from the 2000 Arkansas 4-H Statistical Report by the County Extension Office. **Youth Served** includes those served by special interest and school enrichment programs as well as overnight camping, individual study, instruction television and school-aged child care programs. Source: University Extension Services

CARING NEIGHBORHOOD & COMMUNITY

Hospitals and **Beds** are health care facilities that are members of the Arkansas Hospital Association and the total number of beds available in each of these facilities by county. Source: Arkansas Hospital Association

Licensed Medical Personnel is the number of licensed health professionals with mailing addresses in each county in 1999. Source: Arkansas Health Department Web site, www.healthyarkansas.com/stats/1999data/ ALLBDS31.HTM

Pediatricians and **Family Practitioners** are the number of licensed pediatricians and family practitioners with mailing addresses in each county in 1999. Source: Arkansas Health Department Web site www.healthyarkansas.com/stats/1999data/MEDSET1.HTM

Community Mental Health Centers (CMHC) provide mental health services to adults and children alike. They are located throughout the state, and each county has access to a center as mandated by state and federal law. Source: Arkansas Mental Health Services Directory, June 2000

Children Receiving Care from CMHC was obtained through the Department of Human Services 2000 Statistical Report. Source: Mental Health Statistics Improvement Program

Community Health Centers of Arkansas serve as "safety net providers" of primary and preventative health care and social services for the under-served, uninsured, homeless, rural and migrant population. Source: Community Health Centers of Arkansas Inc. Web site, http://chcasvr2.chc-ar.org/Membership%20Listing.htm

Medicaid Recipients is the number of people who received Medicaid services during the fiscal year. Source: Arkansas Department of Human Services 2000 Statistical Report

FOOD & SHELTER

Food Provision Programs is the number of food pantries, soup kitchens or gleaning operations located in each county. Two agencies provided data for this section. In cases when numbers were not congruent, the larger of the two numbers was used. Sources: Arkansas Hunger Coalition and Arkansas Rice Depot

Children Served by Food Provision Programs and Children Served by "Food for Kids" reflect year-end totals from reporting agencies across the state. Approximately 10% of agencies had not submitted reports at the time of publication. The numbers reflect only the number of children served. They do not show the total number of time these children received food. Source: Arkansas Rice Depot

Summer Feeding Programs reflects the number of summer food service program sponsors in each county. Source: Department of Human Services Division of Child Care and Early Childhood Education

Children Eligible for Free or Reduced School Breakfast and Lunch is the number of children receiving free and reduced breakfast and lunch in 2000. The income limit for the free and reduced breakfast is 130% and 185% of federal poverty level, respectively. Source: Department of Human Services Division of Child Nutrition

Home Ownership is computed by dividing the number of owner-occupied housing units by the number of occupied housing units or households. Source: Profiles of General Demographic Characteristics, 2000 Census of Population

and Housing, U.S. Census Bureau Web site, www.census.gov

CARING SCHOOL CLIMATE

Full-Time Nurses is a measure of hours for which school nurses in a particular district are available to children enrolled in that school district during the 2000-01 school year. Source: Arkansas Department of Education

Full-Time Counselors This is the number of counselors availabale to work with students in each Arkansas school district during the 2001-02 school year. Source: Arkansas Department of Education

Students Per Teacher by Grade Levels is the average number of children per teacher. The ratio of children enrolled in the grade groups to the total number of teachers in the school. Source: Arkansas Department of Education Web site, www.as-is.org

SCHOOL ENGAGEMENT

Reading and Math Scores are the percentage of students scoring at grade level (at or above the proficient level) on the Arkansas Benchmark Exams during the 1999-2000 school year. Source: Arkansas Department of Education Web site, www.as-is.org

Drop-out Rate is the percentage of students dropping out of school in 7th-12th grades from October of one school year to October of the next school year. This data is from the 1998-99 school year. Source: Arkansas Department of Education Web site, <u>www.as-is.org</u>

Graduation Rate is the percentage of students enrolled during 9th grade and completing 12th grade in 1998-99. Source: Arkansas Department of Education Web site, www.as-is.org

Exploring Opportunities for Children in Uncertain Times is a publication of Arkansas Advocates for Children & Families under the Kids Count project, a national initiative funded by the Annie E. Casey Foundation to put the needs of children at the top of the political agenda.

Arkansas Advocates for Children & Families is a non-profit, non-partisan, child advocacy organization founded in 1977. We research, educate, dialogue, compromise and rethink children's issues to create sounder public policies for Arkansas' children and their families.
